Subject: **Application – Senior Software Developer & Analyst**

Dear Hiring Manager,

I would like to submit my application for professional opportunities in Software Development, Full Stack Development, Application Analysis, and Software Architecture.

Throughout my professional career, I have gained over 26 years of experience in the analysis, design, and development of desktop and web applications, working primarily in enterprise contexts and on high-complexity management software.

I currently hold the role of Senior Software Developer & Analyst at Bluenext Srl, where I am responsible for software development, service integration, application migrations, technical coordination, and specialist support.

I have consolidated skills in .NET/.NET Core (C#, VB.NET, and ASP.NET), JavaScript, HTML5, CSS3, SQL Server, MariaDB, and Git, while also gaining foundational knowledge of Angular, TypeScript, Python, React, Node.js, and PHP.

I believe my main strengths are problem-solving, software reengineering, adaptability to different project contexts, a strong predisposition for teamwork, and a commitment to continuous improvement.

After a long professional journey with my current company, I am looking to take on new challenges that can further enhance my technical and human background.

I remain at your disposal for an introductory interview.

Best regards,

Luca Chiarenza
